What is CamFi?

CamFi is a wireless remote controller for DSLR cameras. You can connect a CamFi device to a DSLR camera with a USB cable, then use your mobile phone, PC or tablet to connect to the CamFi device over the WiFi to remotely control the DSLR camera which allows you to view, focus and shoot photos. CamFi also supports automatically transmitting and show photos on your devices (mobile, PC or TV) as they are taken. CamFi supports most types of Canon and Nikon DSLR cameras. It has a built-in rechargeable lithium-ion battery, supports 802.11n WiFi technology, and has a high transmission speed and wide signal coverage.

Wireless remote capture and live view

Use large screen tablet instead of the small viewfinder

CamFi can use Android and iOS devices to be your viewfinder. It can stream live view from the camera to your devices wirelessly.

Save you from awkward pose

Using mobile devices as viewfinder, you can easily shoot the exciting view without having to use those very awkward poses.

Self portrait

Instead of requesting others help you to take pictures, you can connect the CamFi device to your camera, and use your mobile viewfinder to find the memorable moment, then capture it by yourself.

Powerful time-lapse

Most DSLR cameras only provide the countdown shooting. CamFi provides a more advanced time lapse feature which gives you flexibility to set shooting time interval and photo count.

Show photos as they are taken

Show your photos on TV as they are taken

You can use an LCD TV to show your photos as they are taken. You can check the details of your work instantly. This will also give your client better experience in photo shooting.

Android TV stick supported

CamFi application can be installed on a small Android TV stick or Android TV box. Now you can use TV set to be your viewfinder and photo player.

Transmitting raw files faster with SmartView

Raw files are always large. It can take tens of seconds to transfer a raw file via WiFi. With the SmartView feature, it only takes 5 seconds to view a raw file.

Print the photos as they are taken

With the windows client software of CamFi, you can print the photos instantly after they are captured.

Share & Download

Share your moments with friends

When you take photos, you can download them to your mobile phones from your DSLR camera via CamFi, and share them to your social network instantly.

Download original photo and edit raw files

CamFi supports to download the original raw format photo files. You can use your favorite editor to process the raw file on your tablet easily.
